## Body Measurement Instructions For Custom Burial Shrouds

*\*\*Measure to the nearest inch: an ultra-precise measurement is not required.*

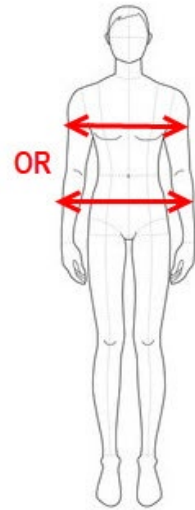

### 1. Height

*Measurement (in inches) of your height.*

### 2. Width

*Straight-line measurement (in inches) of the widest part of your body.*

While lying flat on your back—with your arms at your sides—have a friend measure the widest part of your body. For many folks, this is the shoulder or bicep; for others it is the hips or elbows. Every body is different!

**Measure  
around  
bust/chest**

### 3. Bust/Chest

*Measurement (in inches) around your bust/chest (including arms/shoulders).*

While standing, have a friend measure around your upper torso (ideally, around the bust/chest, to include the arms). This helps us to calculate the length of the ties/straps.
